Acabados / Finishes

Se encuentra en todos los acabados cerámicos: terracota, vidriados y esmaltados. Consultar la gama completa p.119.
It is available in all ceramic finishes: terracotta, glazed and enameled. See full gamma p.119.

Lisa — Azul 62

Cerámica / Ceramic

La base utilizada en nuestras piezas cerámicas es una mezcla de arcillas existentes en la zona de La Bisbal. Las piezas sin esmaltar resaltan por su elegante acabado mate.

Así mismo las piezas vidriadas destacan por la rica gama de colores obtenida con óxidos aplicados conjuntamente con un barniz único por su luminosidad y fluidez. La transparencia de la superficie y la calidad inalterable lograda por una cocción a más de 1020° dan un carácter cálido y luminoso a los ambientes revestidos con vidriado.

Terracota / Terracotta

Terracota Rojo15

Terracota Arena14

The base used in our ceramic pieces is a mixture of clays found in the La Bisbal area. The unglazed pieces stand out for their elegant matte finish.

Likewise, the glazed pieces stand out for their range of rich colors obtained with oxides applied together with a unique varnish, which gives it its luminosity and fluidity. The transparency of the surface, and the unalterable quality achieved by firing at more than 1020°, give a warm and luminous character to the rooms covered with glaze.

Elementos Constructivos Construction Elements

Los elementos constructivos Ferrés se adaptan a los diferentes requerimientos funcionales y estéticos, complementando los proyectos de arquitectura con una amplia gama de formatos, colores y acabados.

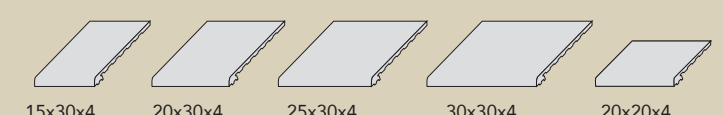

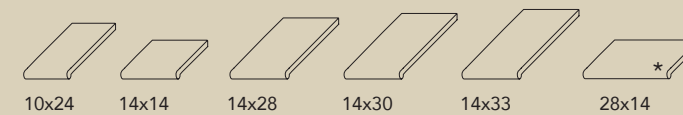

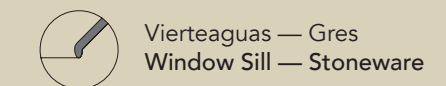

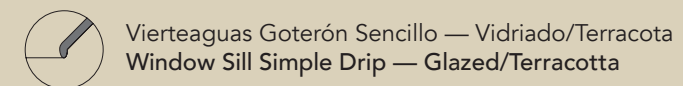

The construction elements of Ferrés adapt to different functional and aesthetic requirements, complementing architecture projects with a wide range of formats, colours, and finishes.

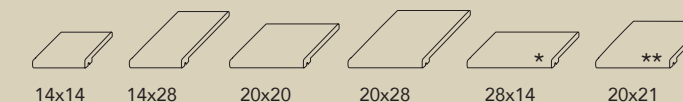

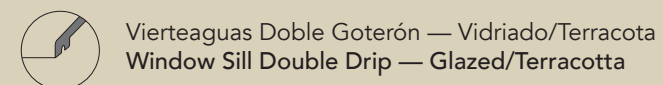

Los vierdeguas Ferrés son la solución perfecta para la entrega final de las ventanas con el exterior, pues impiden la entrada de agua de lluvia en el interior de la construcción. Evitan filtraciones y goteos en la pared gracias al goterón doble y su acabado recto. Disponibles en acabado cerámico y gres natural, y en una amplia gama de formatos.

The window sill rain gutters of Ferrés are specifically designed to finish window sills and avoid leaks and drips to the wall. This is thanks to the double drip and its straight finish. Available in ceramic and natural stoneware finishes, and in a wide range of formats.

*Solo en Terracota / Only in Terracotta

*Solo en Terracota / Only in Terracotta **Goterón paralelo / Parallel run off

Dimensions

All dimensions are approximate. There may be slight variations among pieces of the same color or different colors.

Crazing

There are generally variations of color and mass within a single piece. Some pieces may have small cracks on the glazed surface. This is called crazing, which is a natural feature of glazed pieces and in no way affects either the quality or the result. Variations in dimensions, uniformity, or tone should never be considered manufacturing defects. The color or tone of accessories or supplementary items may be different from that of the tile.

Samples

Since all pieces vary from one batch to the next, the material provided may be different from the original sample. A single sample may not be representative. Therefore, we advise using various representative pieces to determine color variations before making a final decision.

Laying

Pieces laid in damp areas should have a waterproof joint to avoid water infiltration and the formation of moisture inside the tiles. For a more aesthetic look, mix tiles from different boxes.

Scratches

Keep in mind that all glazed surfaces show signs of wear and tear or scratches over time. Remember this when choosing tiles that will be used or applied in a specific place. Most colors are very bright and are therefore not recommended for places where they will be subject to considerable use or wear and tear. It is particularly important to pay attention when laying tiles to avoid hitting or scratching them.

Acids

Food and other acids can damage and stain the glazed surface if allowed to sit. The best way to prevent this problem is to clean up liquids or products of this nature as soon as possible.

Limitation of liability

The company Cerámica Ferrés, S.L., does not accept any responsibility for poor laying and/or maintenance of the material. It is the customer's responsibility to ensure that the product is suitable for each situation or specific area of application. We do not offer any guarantee, either implicit or explicit, regarding resistance to abrasion, displacement of the materials, or maintenance procedures.
